The present invention describes isolated polypeptides, comprising an immunogenic portion of a prostate tumour protain (PTP). The polypeptides and polymucleotides encoding them have cytestatic activity and can be polymucleotides encoding them, antigen presenting cells which express the polypeptides and in gene therapy. The polypeptides and in gene therapy. The polypeptides and can be used for inhibiting the development of prostate cancer in a patient. The polypeptides can be used for inhibiting the development of prostate cancer in a patient. The polypeptides can be used to generate antibodies or anti-didotypyic antibodies for passive immuno therapy. A portion of the polymucleotides encoding the polypeptides can be used as a probe or modulate the expression of the polypeptides. AAAN66241 to AAAN66691 and AAAN82020 to AAAN82020 represent sequences used in the exemplification of

                                                                                                                                                                                                                                                                                                                                                                                                                                                   à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to isolated prostate-specific polypeptides, polypucides, tusion proceins of the polypeptides, antibodies raised against the polypeptides (or antigenic epitopes derived from them) and antigen-presenting cells argressing the polypeptides. The antibodies are useful for detecting the presence of cancer, especially prostate cancer. The polypeptides, polyuclectides and the antigen-presenting cells are useful for stimulating and/or expanding

    for a tumour protein, and for inhibiting the development
T cells specific for a tumour protein, and for inhibiting the developme of cancer especially prostate cancer. Compositions comprising the polypucleotide and/or polypeptide are useful for stimulating an immune response, and for treating cancer. The oligonucleotide is useful for detecting cancer. The present sequence is a prostate specific polymucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                     1144
                                                                                                                                                                                                                                                                                                 1204
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1264
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1324

prostate-specific proteins (II). (I) and (II) have cytostatic activity,
and can be used in vaccine production and gene therapy. (I), (II),
and can be used in vaccine production and gene therapy. (I), (II),
antibodies to (II), fusion proteins comprising (II), and isolated
T cells prepared using (I) or (II) are used treat cancer in a patient.
C (I) and the antibodies are also used in the detection of cancer in a patient.
C (I) and the antibodies are is diagnosed or treated is particularly prostate cancer. (I) and (II) can be used in vaccines. The antibodies or (I) can be used for monitoring the progression of cancer in a patient.
C (I) can be used for monitoring the progression of cancer in a patient.
C (I) and (II) can also be used to improve diagnostic and therapeutic methods for prostate cancer. They can indicate the level of metastasis as well as the prostate volume. Adappage and Admostle to Admostle cancer to the present invention.
                                                                                                                                                                                                                                                                                                                      present invention describes polynucleotide sequences (I) which encode
                                                                                                                                                                                  New polynucleotide encoding a prostate-specific protein, for diagnosing, monitoring and treating prostate cancer in a patient and for use in vaccines -

The present invention describes an isolated polypeptide (P1) comprising at least an immunogenic portion of a prostate specific protein, or its variant. Also described are polynuclectides (N1) encoding (P1). (P1) and The polypeptides, nucleic acids and antibodies from the present invention are useful in the diagnosis and therapy of prostate cancer. Invention are useful in the diagnosis and therapy of prostate cancer. In a genomic region on chromosome 1794P, P715P and B315D are located in a genomic region on chromosome 22411.2 known as the Cat Eye Syndrome relicon. Prostate specific antigen (PA) P501S was located on polynuclectide and polypeptide sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1085 CCCCCTCTGTGCCATCATGATCAGCACCTATGAGTTCGGCAAAAGCTTCTTCCAGAGGC 1144

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes an isolated polypeptide (I) comprising at least an immunogenic portion of a prostate tumour antigen protein or its variant. (I) have cytostatic activity and can be used in vaccine production. (I), prostate tumour antigen polynucleotides, an antigen production. (I), prostate tumour antigen polynucleotides, an antigen production (I) prostate tumour antigen polynucleotides, an antigen productical composition containing (I) are useful for inhibiting the development of cancer in a patient. Antibodies specific for prostate specific proteins and oligonucleotides that hybridise to a polynucleotide that encodes a prostate specific protein are useful confecting the presence or absence of a cancer or monitoring the progression the progression of a cancer, especially prostate cancer.

AAH02422 to AAH2872, AAB74798 to AAB74821 and AAB4830 are sequences cust in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention provides prostate-specific coding sequences and their encoded proteins. These can be used in the diagnosis and treatment of cancers, particularly prostate cancer. The present sequence is a cDNA described in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1204

The invention relates to 625 polynucleotides which have been derived from a variety of human tissue sources and which encode novel secreted proteins, their complements and sequences that hybridise to them.

C proteins, their complements and sequences that hybridise to them.

CC transformed with the vector, comprising the polynucleotide, a host cell proteins antibodies that bind to the proteins and identification of modulators of the proteins or the expression of the polynucleotide.

CC The polynucleotides can be used as probes for the identification and isolation of full length cDNA and genomic DNA. The polynucleotides and isolation of full length cDNA and genomic DNA. The polynucleotides and proteins can also be used as nutritional supplements. The protein cut is useful in the treatment of various immune deficiencies and disorders (c.g. rheumatoid arthritis, multiple sclerosis, autoimmune disorders (e.g. rheumatoid arthritis, multiple sclerosis, conditions (e.g. asthma). They are also useful for treating neurodegenerative diseases (e.g. Alzheimer's disease, Parkinson's

88888888	disease), liver fibrosis, coagulation disorders (e.g. haemophilia), inflammatory discorders (e.g. Crohn's disease) and tumours. They are also useful for tissue regeneration, for wound healing and in the treatment regulating incisions and ulcers. The proteins are also useful for regulating haematopoiesis, for treating myeloid or lymphoid cell deficiencies. The present sequence is one of the 625 cDNA sequences encoding a secreted protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes a method for examining ischaemic conditions, comprising measuring the expression levels of particular genes (I) in a test sample or determining the expression profile of a genes (I) in a test sample comprising genes salected from (I). The method is useful for examining the ischaemic condition (e.g. compressive schaemia, occlusive ischaemia or vasospastic ischaemia, by measuring expression levels of particular genes (AB192202 to AB19912, encoding the protein sequences in ABB57202 to ABB5734) or by determining the expression profile of a gene group comprising these genes. The expression levels or expression profiles produced by these genes are used as an indicator when screening for ischaemic condition.improving drugs or therapeutics for ischaemic diseases. AB19913 and AB19914

Crepresent PCR primers for a mouse ischaemic condition related sequence, which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Examining the ischemic condition (e.g. occlusive ischemia) by measuring expression levels of particular genes defined in the specification or by determining the expression profile of a gene group comprising these

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  0,
                                                                The invention relates to a novel method for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma or metastatic liver
                                                                                                  progression of liver cancer, hepatocellular carcinoma or metastatic liver tumour in a patient, and differentiating metastatic liver cancer from hepatocellular carcinoma in a patient, involving detecting the level of expression of two or more genes represented in ABN93503-ABN97455 in a tissue sample. The method of the invention has bepactoropic, and cytostatic activity. The method is useful for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma and metastatic liver carcinoma in a patient. The method is useful for identifying expression profiles which serve as useful diagnostic markers as well as markers that can be used to monitor disease states, disease progression,
                                                                                                                                                                                                                                                                                                                                                                                                                                                     drug toxicity, drug efficacy and drug metabolism.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO

The present invention relates to nucleic acids from the mouse, where the nucleic acid is associated with apoptosis. The sequences can be used in the diagnosis, treatment and prevention of diseases associated with excessive or inadequate apoptosis, including tumours, autoimmune diseases, viral infections, degradative diseases (Alzheimer's, Parkinson's and Huntington's diseases), repetitision injury, stroke and alcohol-induced injury to the liver, for identifying agents for treating these diseases, and to prepare transgenic animals in which expression of an apoptosis related sequence is altered. These are useful for genetic and/or pharmacological investigations of apoptosis and related diseases, another sequences of apoptosis and related diseases, another apoptosis related sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                216
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               273

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 6, Application US/09434288
| Patent No. 6303767 |
| GENERAL INFORMATION: A Patent No. 6303767 |
| APPLICANT: Betlach C., Melanie |
| APPLICANT: McDaniel Robert |
| TITLE OF INVENTION: POLYKETIDE SYNTHASE ENZYMES AND RECOMBINANT DNA TITLE OF INVENTION: CONSTRUCTS THEREFOR |
| TITLE OF INVENTION: CONSTRUCTS THEREFOR |
| TITLE OF INVENTION: CONSTRUCTS THEREFOR |
| CURRENT APPLICATION NUMBER: US/09/434,288 |
| CURRENT FILING DATE: 1998-11-05 |
| PRIOR APPLICATION NUMBER: 60/107,093 |
| NUMBER OF SEQ ID NOS: 12 |
| SOFTWARE: PatentIn Ver. 2.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  451 ACCAGGACCCTCTGGAGCGGCCTCCCCGCCACCTGGTGATGACTGTGCCAGCTACCGCC 510
